

The Companion Project Rubric												
	3				2				1		0	
Design	Excellent show of skill in taking great care of details in construction of your companion and also meets building requirements				clear attempts to construct a unique companion/place				Attempted to meet requirements but with inconsistent results. intentions may be unclear		a clear lack of intention in the final products	
physical requirements	companion is 2-4 inches tall, place is completely decorated inside and outside and both are made of multiple materials,				an attempt at using a variety of materials, colors, and textures and the place and companion or mostly decorated				little care was taken to meet the size requirement and there is a lack of variety in materials and the place was only half decorated		a clear lack of adherence to the requirements, way too small or only partially decorated place.	
Concept (unity)	the companion and the place are highly cohesive by either color, texture, shape etc or a combination of such				shows similarities between companion and place				an attempt at cohesion is apparent but it is a stretch to see it without further explanation		the companion and place are completely dissimilar and lack cohesiveness	
Craftsmanship and effort	no evidence of adhesion techniques visible, clean and sturdy construction of companion and space is apparent				time management skills obvious, minimal visible adhesion techniques, and there is evidence in thorough planning and execution				quality and effort are inconsistent. some aspects of these sculptures lack attention to detail.		the companion and place show no signs of care afforded to their creation, adhesion technique is distracting and most requirements are missing and time was not spent effectively
